

Group 19 Essence

We are at the *Working Well* state. Looking at the lower states, *Principles Established* is fulfilled because we, e.g., agreed that we needed tools to communicate, to collaborate (with coding), and to document. We also agreed on assigning tasks to be able to work individually. *Foundation Established* is fulfilled because we, for example, agreed on linking to issues in our commits, creating branches for all issues, using Git for task management, using Gradle as a build tool and using Discord for communication. Also, the strengths and weaknesses of the group members were discussed. The *In Use* state is fulfilled since, for instance, the team is working, and the tools are used in order to do real work. Additionally, testing is performed, communication and collaboration is supported by Git and Discord, and issues and milestones on Git are used to handle feedback. *In Place* is fulfilled because the whole team is using Git and the corresponding practices, and all of our members have access to the GitHub repository, etc. Finally, *Working Well* is fulfilled because we have gotten used to the way we work and proper commit messages etc. are made without much thought. Also, every member of the team knows how to use all the tools and makes progress as planned. However, we are not yet in the *Retired* state, since we have another assignment to complete as a team.
